MEV-1 has the potential to extend the life of on-orbit satellites like Intelsat 901.

To view a complete copy of the SIA Principles of Space Safety, please see the press release.

The SIA also supports the adoption of rules for the RDOF that appropriately account for and support innovative hybrid offerings, as more and more service providers rely on multiple technologies to support the provision of funding. SIA urges the Commission to revise its proposed penalties for the second latency tier so that the bidding framework does not undermine the success of the auction or unfairly discriminate against certain technologies.

Further, by amending the terrestrial networks, the record demonstrates that a high penalty would prevent GSO providers from winning points in the Connect America Phase II Auction to 40 points in the RDOF would significantly impair—if not prevent—the provision of this service to the rural areas that need it most. The Commission should reject the FCC's Notice of Proposed Rulemaking (NPRM) proposing to create the Rural Digital Opportunity Fund or Fund Proposal.

The Commission should reject the FCC's Notice of Proposed Rulemaking (NPRM) proposing to create the Rural Digital Opportunity Fund or Fund Proposal.
